

6 km of 12-core optical cable

Overview

In this project, we constructed a cable of 12-coupled-core fiber, in which signal coupling occurs between 12 cores, while significantly reducing propagation delay dispersion, and installed it in a tunnel or aerial section emulating a terrestrial field environment. In this press release, we announce the success of our transoceanic long-distance transmission experiment over 7,280 km using 12-core optical fiber. We spoke with the researchers about the details on what purpose and meaning this success has and what technologies were used to achieve this success. Imm (main cord) Material Stainless Steel Color Silvery White UL94 V-0 (*Burning stops within 10 seconds on a vertical specimen, no drips of flaming particles. The fibers are housed loose tubes made of a high modulus plastic that filled with a water-resistant filling compound. 12 Core FTTH Single Mode Optical Fiber Cable - Round OD 6 mm + FRP + Yarn Our 12 Core FTTH Single Mode Optical Fiber Cables are designed to meet the high demands of modern telecommunications networks.
