

90-degree inner angle of cable tray

Overview

A perforated type cable tray vertical inside bend is a fitting used to change the direction of a cable tray system vertically, typically at 90-degree angles, allowing cables to turn upwards or downwards within a confined space. Elbow joint RVS is pushed inside the cable tray and attached with the included screw set. Need more information?

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle.
