

AOC 1-to-2 Fiber Optic Patch Cord

Overview

AOC patch cord is a low-cost connection method in the data center, which can be applied to 40G/100G/400G rate interconnection; its composition is to add fiber ferrules to both ends of an optical cable to achieve the connection between optical modules the interconnection is. These cable types (AOC – Active Optical Cable, DAC – Direct Attach Copper, Fibre Patch Cables) offer high bandwidth but differ significantly in cost, distance capability, power consumption, EMI performance, and flexibility. Since its interface is shielded inside, they can be protected perfectly from dirty and damage, and hence the stability and reliability of the system. Each end of the cable contains an active module that converts electrical signals to optical signals and back again. They find application in multi-lane data communication and interconnect scenarios, enhancing storage, data, and high-performance computing. Professional manufacturer of Fiber Optic & Copper Patch Cords, MTP/MPO/AOC/DAC Cables.
