

Alarm Access Switch Settings

Overview

Click Access Control > Advanced Function > Device Parameter to enter access control parameter configuration page. In the device list on the left, click to expand the door, select an alarm input and you can edit the alarm input's parameters on the right. This article explains how to configure terminal settings in the Access application after wiring devices (e. , locks, door position sensors, push-to-exit buttons, and motion sensors) to your UniFi Access Control Hubs for optimal performance and customization. Add access control device to the client, and make sure the device supports alarm output. You can do this configuration on web Phone > Relay > Relay Setting > Local.
