

Anti-tracking installation solution for fiber optic cable laying in Israel

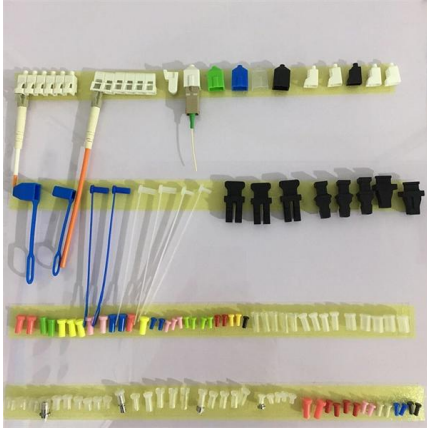

Overview

Engineers can mitigate these by choosing a track-resistant 4 sheath, installing dampers, and using rodent-resistant 5 jackets. With Corning® Clear Track Fiber Pathways, virtually invisible Gigabit broadband is now available for both inside residences and multidwelling unit (MDU) hallway applications. When we talk about self-supporting aerial installations, one of the most common applications for long-distance transmission is the laying of fiber optic cables in high-voltage towers. For the first time, homes in the City of the Patriarchs are connected to broad band Internet. These cables are designed with advanced materials that inhibit the formation of conductive paths on the surface, reducing the risk of electrical.
