

Bedroom electrical distribution box grouping design

Overview

Once all the cable sheathing has been stripped, you can loosely group like-wire groups—grounds, neutrals, and hots—in advance of terminating them (attaching wires to lugs) inside the panel. As is customary in all phases of house wiring, terminate the ground wires first. A well-designed distribution board makes it easier to find faults, minimizes cross-trips, and ensures adequate space for future expansion. This electrical floor plan illustrates the electrical system of a residential house, detailing the placement of lights, switches, and outlets in different rooms including the bedroom, bathroom, kitchen, living/dining room, and storage room. The distribution board configurator from Eaton is a multifaceted, web-based configuration tool for electrical distribution systems from residential construction to small commercial buildings.

Bedroom electrical distribution box grouping design

Organizing a Panel Box

Ideally, wire groups are installed in layers and wires are bent at right angles to buses or breakers. Label short sheathing sections (slugs) to indicate which circuits wires serve.
