

Can a PoE switch power a fiber optic transceiver

Overview

Power over Ethernet (PoE) does not work directly over fiber-optic cables because fiber-optic cables are designed to transmit data using light, and they do not conduct electricity. PoE requires copper cables (such as Cat5e, Cat6, or Cat6a) to deliver both power and data. PoE power supply can only supply power to PoE powered devices through the network. OmniConverter 10/100/1000 and Multigigabit PoE Switches and PoE Media Converters enable distance extension over fiber optic cabling to network edge devices such as workstations, IP cameras and Wi-Fi access points. However, using a PoE switch in conjunction with fast (high-speed) SFP modules may present challenges.
