

Can the switch connect to fiber optic cable 6

Overview

Fiber optic switches utilize specialized ports such as XFP, SFP, CFP, SFP+, or QSFP+ to connect to fiber optic cables. These ports aren't directly compatible with the cables themselves; they require transceiver modules. In addition, fiber cables can transmit data over several kilometers without signal degradation, making them ideal for connecting switches in large campus networks and between different buildings. As they do not emit electromagnetic signals, they're difficult to tap and secure against eavesdropping. Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence. Those who use fiber to connect switches together what do you use?
