

Category 8 patch cords and fiber optic patch cords

Overview

This whitepaper provides a detailed guide to selecting patch cords and panels compliant with ANSI/TIA, ISO/IEC, and IEC standards — featuring the latest advancements such as Category 8 copper, OM5 fiber, 26–32 AWG slim cords, 2 mm uniboot modular fiber cords . As networks move to higher speeds and higher density, choosing the right fiber optic patch cords becomes critical to the reliability of your system. In high-performance data networks, patch cords and patch panels form the physical interface between active equipment and structured cabling. Corning offers the most complete line of connectors and factory-terminated cables, from single-fiber cords to high-fiber-count cable assemblies. While high-fiber-count trunk cables form the massive backbone of modern data centers, the performance of the entire network ultimately hinges on the final few meters: the MPO / MTP® patch cord. Our product offering includes: jumpers (patch cords), multi-fiber cable assemblies, rackmount enclosures, wallmount enclosures, and fiber optic and copper based network components.
