

Changing the port mode of a fiber optic switch

Overview

Configure the FCoE VLAN interface port mode to F_Port to connect the switch to FCoE initiators, or configure the native FC interface port mode to proxy N_Port (NP_Port) to connect the switch to an FC switch fabric port (F_Port). Each Fibre Channel port can be used as a downlink (connected to a server) or as an uplink (connected to the data center SAN network). If the switch either fails to show a link between an installed transceiver and another device or demonstrates errors or other unexpected behavior on the link, check the port configuration on both devices for a speed and/or duplex (mode) mismatch. In this comprehensive guide, we will delve into the operation and installation of multimode fiber optic switches, shedding light on their importance and benefits.
