

DVP760 Fiber Optic Fusion Splicer Defects

Overview

The following describes the most common problems, their quick diagnosis, and recommended solutions. Fibre fusion splicers are critical instruments in modern optical fibre installation and maintenance. When properly maintained and operated, they produce low-loss, high-strength splices. When you get a "splice failed" message, it means that the splicing process didn't. The guide provides the complete workflow, covering safety precautions, tool selection, fiber preparation, fusion operation, quality control, and. The fusion splicer cannot be turned on The factors that cause this fault can be analyzed from the following points: (1) Is the external power supply normal?

(2) Is the external switch normal?

(3) Can you see the motherboard information when you turn it on?

If not, it may be that the motherboard.
