

Distribution box self-test light

Overview

Self-contained luminaires with automatic test (self-test) onboard continuously display battery and light source circuit status via LED, automatically starting weekly function and annual duration tests. This visual test removes the need to push a test button which often requires a user. Emergency lighting with DALI constantly monitors the system, storing reports of any failures or issues and ensuring that the system is 100 percent healthy for the maximum time possible. The health of building occupants is assured, and automatic monitoring is on-proprietary. These advanced fittings feature built-in self-test functionality, meaning they routinely test themselves to ensure they remain compliant with emergency.

Distribution box self-test light

How to Use an Automotive Test Light

What is a test light on a car and how to use it? Find out the answers in this helpful guide. Read on for more information.

Self Testing Emergency Lights

Shop Self Testing Emergency Lights with self-diagnostics, adjustable LED heads, 90-minute battery backup, and remote-capable options for code-ready egress.
