

Does the use of a splitter by two companies have any impact

Overview

Where splitters are placed in the network can make significant impacts on fiber counts, network cost and deployment time and operational steps, such as customer onboarding and maintenance. An Ethernet splitter can drop your network speed from gigabit (1000 Mbps) down to just 100 Mbps. But if you care about fast file transfers, gaming, or streaming, it can definitely hold you back. Standard Cat5e or Cat6 cables contain four pairs of twisted copper wires, totaling eight individual strands. The scenario which leads to this conclusion may even be how you found this article. But is a tool meant to be convenient actually hindering the speed you pay for?
