

# **Effect distance of multimode 10 Gigabit fiber optic cable**

## Overview

---

For 10 Gigabit Ethernet over OM2 fiber, the typical reach is up to 82 meters (approximately 269 feet). This reach is based on the standard OM2 fiber characteristics and the use of 850nm wavelength transceivers, which are common for multimode fiber applications. The implementation of a cabling design, compatible with LED and laser-based Ethernet network devices, which will allow the integration. However, the dispersion-compensating fibers can support more than 200 kilometers. OM3, OM4, and OM5 are types of multimode optical fibres commonly used in data centres and enterprise environments to support various network speeds and transmission distances, including 10 gigabit Ethernet (10G), 40 gigabit Ethernet (40G), 100 gigabit Ethernet (100G) and 400 gigabit Ethernet.
