

Embedded components of distribution box

Overview

Inside a distribution box are components like circuit breakers, earth leakage units, doorbells, and timers. The building's electrical power enters through the main feeding cable, which connects to the distribution board. We also highlight how reliable manufacturers like NUOMAK support stable, compliant, and cost-effective power distribution. The range of applications extends from pure energy distribution in buildings to building automation and through to industrial plants. Due to the long time interval between the embedding of the box and the installation and wiring of the box panel, the box shall be disassembled with the box cover (door) and the panel first, and marked for storage, so as to prevent the electrical components and the box cover (door) from damage or.
