

Enabling the optical port on the Huijue S2800 switch

Overview

Connect the RJ45 connector at one end of each hybrid cable to a multi-GE port on the switch, and then connect the LC connectors at the same end to the RX and TX ports of an optical module installed on the switch. When AC power input is adopted for the switch, the maximum total power that can be supplied by the PoE-enabled switch is 150 W. When you hear a clear click, it indicates that the crystal head is successfully connected with the network port of the switch. Use the system-view command to enter configuration mode, then navigate to the target port using interface GigabitEthernet 0/0/1 (replace with your port ID).
