## Overview

---

You can do this with electrical tape, shrink wrap, and other insulating sheaths. This solution is ideal for small sections of exposure that aren't at a high risk of becoming exposed again. It takes the incoming power and safely distributes it to different circuits throughout your building. Both the Occupational Safety and Health Administration (OSHA) and the National Fire Protection Association (NFPA) require the insulation and protection of wiring energized at 50 volts or higher if the wiring is equal to or below eight feet off the ground. Is it normal for these wires to be exposed outside of the box, or does this need to be addressed?

They're likely grounding conductors. Outlet boxes are essential components of electrical systems, providing a secure housing for wiring connections.
