

Fireproof cable trays are galvanized

Overview

These trays are coated with a protective layer of zinc (galvanization), enhancing their resistance to rust, fire, and environmental damage. We provide a variety of options that include different materials and finishes, such as powder-coated aluminum, galvanized steel, and fiberglass with intumescent coatings, all designed to improve fire resistance. Our commitment to fire safety not only safeguards occupants and property but also. Foundational requirements for a fire resistant cable tray are often phrased similarly to: "Fire resistant Hot Dip Galvanized Cable Tray. Single layer 50mm encapsulated with aluminized polypropylene scrim or faced with protective material. There are several material choices available for cable trays in today's market, the most popular choices are steel (HDG/SS), aluminum, PVC and FRP/GRP.

Fireproof cable trays are galvanized
