

# **G657A fiber optic cable is single-mode**

## Overview

---

A1 or A1 fiber compatible cable is a reliable high- performance single-mode fiber. Single-mode fiber is a single bundle of glass fibers used to transmit single-mode or light. It can carry a higher bandwidth than multimode fiber; however, it requires a light source with a narrow spectral width. Learn the key differences between G652D, G657A, and G657A2 single-mode optical fibers, including bend performance, applications, and costs. Imagine G657A1 vs G657A2 vs G652D as a trio of runners gearing up for different races—one's a marathon champ, another's a sprinter weaving through city streets, and the third's an acrobat flipping through tight corners.

### Single-mode optical fiber

In fiber optics, a quadruply clad fiber is a single-mode optical fiber that has four claddings. Each cladding has a refractive index lower than that of the core.

G.657 is an international standard developed by the Standardization Sector of the International Telecommunication Union (ITU-T) that specifies single-mode optical fiber (SMF) cable.
