

Has the price of optical fiber increased this year

Overview

From late 2025 through the first quarter of 2026, the global fiber optic cable market experienced one of the sharpest and most unexpected price surges in its history. In some cases, suppliers only guarantee quotations for the same day, and in extreme situations even half-day quotations are appearing in the market. After an extended period of subdued pricing in several regions, optical fibre prices are rising sharply alongside sustained demand. Over the past several months, upstream material costs and supply chain constraints have pushed fiber prices upward, directly impacting cable assemblies, patch cord production, and passive optical components.
