

High-voltage power distribution equipment busbar

Overview

Rigid copper busbars offer significant advantages in high-voltage connections and transmission. They conduct electricity efficiently, reducing energy losses, and withstand electrical surges and mechanical stress, ensuring the stability of power systems over time. To connect various high voltage (HV) components to the HV system, TE also delivers a wide variety of busbars. Busbars (bus bars) are integral to power distribution and serve numerous industries including automotive, industrial, and aerospace. Vertiv™ PowerBar HPB is a 1000V totally encased, non-ventilated and low impedance busbar. HPB sandwich construction range has been engineered for applications which require moving large amounts of power.
