

How can I soften the stiff pigtail fiber

Overview

Fiber Strippers: These are specialized tools designed to peel away the outer buffer and the microscopic coating of the fiber without scratching or nicking the glass core. A fiber pigtail is a short length of optical fiber that comes with a high-quality, factory-polished connector already installed on one end, leaving a length of exposed glass on the other. Executive Summary: A fiber optic pigtail is one of the most commonly specified yet least understood components in structured cabling. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a.
