

How many optical modules can the module box hold

Overview

A 2U fixed tray enclosure can hold up to 24 modules, with each tray holding up to 12 modules. It's important to note that the number of modules that can be accommodated by a rack-mount enclosure depends on the size and type of the enclosure. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. This document focuses on projection optical modules that incorporate Texas Instruments' DLP Display chips and are designed to project an image onto a surface for a variety of applications, including smartphones, tablets, display projectors, smart home displays, digital signage, AR glasses, and.
