

How much does a Brazilian micro-module cost

Overview

The estimated initial cost for a Brazilian micro reactor is around US\$ 10 million, which is expected to decrease with mass production, making it a cost-effective alternative to diesel generators in remote areas. FOAK SMR LCOE is likely to land in the \$90-\$160/MWh range, depending on financing and construction risk—above today's wind and solar, but potentially competitive with gas in some firm-power roles. The analysis documented in this report provides economic and technological information to assist Brazil. Notes: MER = market exchange rate; SMR = small modular reactor; APS = Announced Pledges Scenario.
