

# **How much does it cost to install a beam splitter**

## Overview

---

Complete installation includes: engineering and permits (\$1,000-2,500), beam material (\$50-300/foot), delivery and handling, temporary shoring, cutting pockets/preparing bearings, installation labor, connection hardware (hangers, bolts, plates), removing old structure . Beam splitters are critical for managing optical power flow in a wide range of setups. Selecting the right component involves navigating trade-offs between power handling, polarization sensitivity, chromatic dispersion, and mechanical stability. Beam installation costs an average of \$3,374, but prices can range from \$225 up to \$11,500 depending on a few factors, like the type of beam you need, the length, and more. However, if you're a DIY enthusiast willing to tackle the heavy lifting yourself, you could substantially reduce costs by only paying for materials.
