

How to drill holes in cable trays to allow wires to pass through

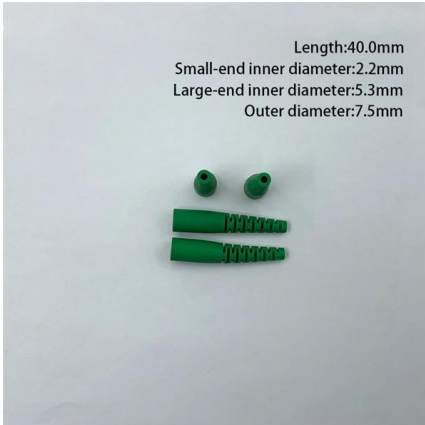

Overview

All you have to do is quickly measure the diameter of the cable, and then make sure the drill bit that you pick, is slightly bigger to allow you to drill the hole. The cable should be able to easily pass through the hole without being forced through. Whether you're running conduit, trunking, tray, or basket, these services often need to cross between rooms or fire compartments — and. In today's world, where reliable internet and cable connections are essential, the need to neatly and safely integrate these wires into our homes is more important than ever. Now, I can get ahold of a circle drill/hole drill easily and put more holes in for cable management than the one that is currently there in the corner, but I don't want to do it without proper thought, I want to measure twice, cut once as it were, throughout the whole planning process of how this.
