

How to find the IP address of the access switch

Overview

In the following sections, we will explore various methods to obtain the IP address of a network switch. From utilizing the command line interface (CLI) to employing network management software and checking the router's DHCP client list, there are multiple approaches to. If there comes a situation where I need to know the IP addresses of the devices connected to either Switch A or B, what would be the right way to find it?

I know that if I run the command `Show Arp`, it would display the MAC and IP addresses of the End devices, but it can be run only on the Core. Finding the IP address of your network switch is crucial for a variety of tasks, from configuring its settings to troubleshooting network connectivity issues. I use a D-Link DGS-1005A (you can see the manual [here](#)) switch that sits between my main router provided by the ISP and my machine and I am trying to find its IP Address so that I can play with the device's settings. The problem is that I can't seem to find the device's IP when I scan the network.
