

How to ground the power distribution box in the computer room

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. They have a copper pipe system underneath the floor (with soldered - yes soldered connections), which they use as a computer ground. Below is a comprehensive guide for implementing effective bonding and grounding systems in data centers. Control panels typically feature an input power feed having a grounding conductor that is ultimately bonded to the electrical enclosure. During fault conditions, low impedance results in high fault current flow, causing overcurrent protective.
