

How to install a long fiber optic cable junction box

Overview

OPGW cable joint box installation involves several key stages: selecting the appropriate location, preparing both the cable and the joint box, splicing fibers, and sealing the joint box properly. Compared to conventional copper cables, fiber optic cables offer a significantly higher bandwidth and are less susceptible to interference. If possible, use an automated puller with tension control or at least a breakaway pulling eye. A fiber optic junction box, also known as a fiber optic distribution box or termination box, is a protective enclosure that facilitates the connection and management of fiber optic cables.
