

# **How to lay the fiber optic cable reel down**

## Overview

---

Store reels on solid ground to avoid flanges from sinking into ground, do not lay on its side. The FCR-1000 series cable reels are designed to fit Princetel's standard FORJs and slip rings. The rotary joints are protected inside the drum for durability and seamless deployment of single or multi-channel fiber optic and/or electrical cable with uninterrupted optical and/or electrical signal. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. This Applications Engineering Note (AE Note) addresses common issues regarding cable pay-off during outside plant installations known as cable squirting, cable tangling during payoff, and reel storage. 5 miles or 4 kilometers), it may be necessary to use an automated fiber puller at intermediate point (s) for a continuous pull or pull from the middle out to both ends (midspan).

### GENERAL INFORMATION

Cable reels unloaded down ramps should be rolled in a controlled manner. The ramps must be of a gradual incline, spaced parallel and wide enough to ensure contact at all times with both reel flanges

### Optical Fiber Cable Installation Guideline

All Fiber Optic Cable reels should be stored upright. Laying the reel on its side may cause damage to the reel flange and/or cause the cable layers to shift - This may cause cable to snag during de-reeling.

### 101 Guidelines for Fiber Optic Cable Installation

Maintain proper clearance between the fiber optic cable and power cable at all times. Always make allowances for power cable sag due to weather and current conditions.

### Optical Fiber Cable Installation Guideline

Where it is necessary to lift reels and the cable reel is too heavy to move manually, the reel must be moved upright by lifting the cable with a fork lift or reel mover.
