

How to shield the low beam without installing the low beam module

Overview

Adaptive Cutoff: The Adaptive Cutoff system uses multiple light sources and advanced software to dynamically adjust the beam pattern and cutoff line based on the vehicle's speed, steering angle and surrounding environment. When we want to replace and upgrade our car headlights, we will pay attention to their brightness and beam pattern. So one side is workin and other isn't?

One easy way to bypass the problem would be to get a headlight wiring improvement kit. If your car has xenon or LED headlamps, you won't be able to replace the low beam bulb yourself and will need to go to a workshop. It's a lot easier for everyone if you simply have one thread that consolidates all of them.

How to shield the low beam without installing the low beam module

How It Works: Automatic and Adaptive Headlights (Low)
