

Hungarian Figure-8 Optical Cable 2 Cores

Overview

The ZCC double-core figure-eight optical cable uses $\Phi 900\mu\text{m}$ or $\Phi 600\mu\text{m}$ tight-buffered optical fibers as the optical transmission medium, covered with a layer of aramid yarn as a strength member, and extruded on the outside with a figure-eight-shaped polyvinyl chloride (PVC) or. GL FIBER Supply 2~12 Cores GYXTC8Y Mini Figure-8 Fiber Optic Cable with factory price, Support OEM. Optical fibres are housed in loose tubes that are made of high-modulus plastic and filled with water blocking yarns. The tubes (and fillers) are stranded around the central strength member to form a cable core. In the ever-expanding universe of fiber optic networks, where speeds reach 800G and beyond while global FTTH connections surpass 2.2 billion by late 2025, one cable design continues to dominate aerial installations: the figure 8 fiber optic cable.
