

Is it a good idea to install ambient lighting in network server racks

Overview

Narrow pendant fixtures mounted directly above aisles illuminate the space between racks without creating glare inside cabinet interiors, letting technicians see what they're doing without squinting. Datacenter technicians spend hours in server rooms where lighting conditions directly impact their ability to work safely and efficiently. Poor ambient lighting causes eye strain, reduces concentration, and increases accident risk-yet many facilities overlook this critical factor. Security, energy efficiency and good working conditions: such are the core tasks for lighting in server rooms. This metric serves as a guide for designers assessing the performance of light sources in various parts of a data center.
