

# KVM switch not recognizing graphics card

## Overview

---

In the meantime, you can try some general troubleshooting steps, such as updating the drivers for your graphics card and monitor, and ensuring that all the cables are securely connected. Also, try switching the cables or using a different port on the KVM switch to see if the. Verify that the correct video input is used and that the adapter matches your system, whether you're using USB-C, HDMI, or DisplayPort. However when I switch to the PC input and start the PC, I am able to see the bootloader and I can interact with it, but as soon as Windows or Linux starts loading, the signal goes out and the. I have a desktop that was upgraded from an AMD RX 5500 XT video card to an NVidia RTX 5070.
