

Noise from the rooftop electrical distribution box

Overview

A faint hum you can only hear right up against the panel is often just electrical current flowing through wires. How does exterior noise (rain, hail, highways, aircraft noise) transmit through a roof to the building interior and how can we soundproof building roofs for a quiet building interior?

These articles discuss building noise control: how to inspect, diagnose & cure noise or sound problems in homes or. Kinetics ESSR vibration isolated curb system addresses all noise sources associated with packaged rooftop equipment. These are some of the most frequent sources of panel noise, especially in San Diego. A breaker box (electrical panel or service panel) is the main distribution center for your home's electrical system. The noise has been identified as coming from the electrical distribution box which is attached to a cement wall that runs up all three floors in my bedroom as a firewall. In the distribution room, audible noise is generated due to the vibration of the power equipment.
