

# Number of cores in the optical cable splice closure

## Overview

---

From a functional perspective, a fiber optic splice closure must address three core requirements at the same time. The closure shields delicate fiber splices from external forces such as pulling, bending, vibration, and impact. The optical cable joint closure is an essential product in the Optical fiber communication system and is mainly applied to branching and continuing of the trunk optical cables in the optical fiber communication network. The solid box shell and the main structure are built to withstand harsh environments.
