

ODF fiber optic patch cord reel box

Overview

An optical distribution frame(ODF) is a frame used to provide cable interconnections between communication facilities, which can integrate fiber splicing, fiber termination, fiber optic adapters & connectors and cable connection. The standard size ODF is typically 19 inch in dimension, allowing it to be installed either in a distribution cabinet or rack. The fiber distribution frame as the terminal equipment of the optical optic cable should have 4 basic functions: Fixation and Protection of Optical Patch Cord: With optical patch cord introduction, fixing, and protection devices.
