How To Use Fiber Optic OTDR Tester?

For fiber optic engineers and technicians, mastering the use of OTDR Tester is the key to ensuring the stable operation of fiber optic networks.

What Is OTDR: Optical Time Domain Reflectometer Explained

An OTDR, or optical time domain reflectometer, is a fiber optic testing instrument that sends pulses of light down a fiber cable and analyzes the light that bounces back.

An optical time-domain reflectometer (OTDR) is an optoelectronic instrument used to characterize an optical fiber. It is the optical equivalent of an electronic time domain reflectometer which measures the impedance of the cable or transmission line under test. An OTDR injects a series of optical pulses into the fiber under test and extracts, from the same end of the fiber, light that is scattered (Rayleigh backscatter) or reflected back.
