

Precautions for fiber distribution box welding

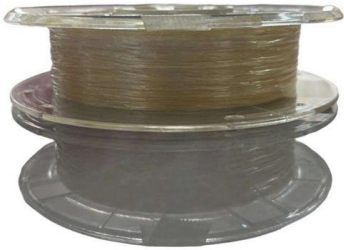

Overview

During the welding process, the "V" groove, electrode, objective lens, welding chamber, etc. Before splicing, according to the material and type of the optical fiber, set the key parameters such as the optimal pre-melting main melting current and time, and the amount of fiber feeding. Alerts are included in this instru d ath or serious i jury ectacles) conforming to ANSI Z87, for eye protection from accidental injury wh n ha dling chemicals, cab. Besides the usual safety issues for all construction, generally covered under OSHA rules in the US (OSHA 10 and 30), fiber optics adds concerns for eye safety, chemicals, sparks from fusion splicing, disposal of fiber shards and more, covered in Part 1. To ensure consistent performance and longevity, it is essential to adhere to strict technical specifications.
