Relay protection sensitivity integrated optimal placement and capacity

The IIDG effect on the relay protection sensitivity was analysed and the relay protection sensitivity re-evaluation method was developed. The relay protection sensitivity evaluation was

Using sensitivity coefficients for power swing protection

Tripping of a transmission line during a power swing causes instability of a power system. When a power swing occurs, distance relays are tripped. In such a case it is necessary to set the

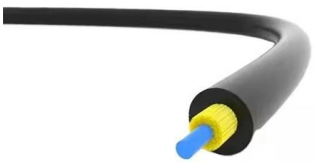

Power Relays Application Guide

This guide covers all of our true power relays as distinguished from directional power and direc-tional overcurrent relays. Its purpose is to pinpoint exactly the relay required for any specific appli-cation.
