

# Servo power distribution box on site

## Overview

---

The solution is to use a power distribution box, like this one from Hobby King for £25, weighing 80g. Rocking a full 8 channels to deliver power to your servos, the Servo Power Distribution Board (Servo PDB) distributes power between electronics generating PWM signals and the components receiving them! All positive contacts of the Servo PDB are tied together as well as its negative contacts. Synchronous servomotor with integrated servo drive for control cabinet-free modular machine concepts.

A site box is an electrical device used on temporary sites such as construction sites, market stalls, campsites and trade fairs. It provides temporary electrical distribution before the electrical panel is

### Servo power distribution boxes

There are two sets of pins for each channel, so two servos can be plugged in, thus avoiding Y-leads. The box passes on the signals but supplies the servo current itself, direct from the receiver batteries.
