

Should I buy a broadband or fiber optic router

Overview

The key difference between broadband and fiber lies in their underlying transmission medium and resulting performance, with fiber optic vs broadband showing clear advantages in speed, latency, and future-proofing. General broadband uses DSL, cable, or satellite delivered over copper or coaxial networks. Fiber optic internet is a much more advanced type of broadband that moves data as light, which is a polite way of saying. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet.
