

# TI optical module

## Overview

---

Build high-performance and power-efficient optical modules for wireless, data center and communication applications with our optical networking ICs. Our products simplify designs by integrating transceivers, transimpedance amplifiers, post amplifiers and laser drivers. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. This reference design features the DLP® Pico™ Products p23-inch TRP 1080p display chipset and is implemented in the DLP LightCrafter™ Display 230NP evaluation model (EVM). This solution shortens customer design time, thereby saving customer costs, without sacrificing performance. Texas Instruments' OPT3101 is a high-speed, high-resolution AFE for continuous-wave, ToF-based proximity sensing and range-finding.
