

The cover of the electrical distribution box is too big

Overview

When the hole for a junction box is too large, use a metal cover plate designed to cover excess space. First, turn off power, then position the plate over the hole, securing it with screws into the junction box. It takes the incoming power and safely distributes it to different circuits throughout your building. The distribution box has the characteristics of small size, simple installation, special technical performance, fixed location, unique configuration function, not limited by the site, relatively common application, stable and reliable operation, high space utilization, less land occupation and.
