

The function of the fiber optic multimode converter network cable interface

Overview

Multimode fiber optic cable is designed for high-speed data transmission in local area networks (LANs), data centers, and enterprise environments. Multimode fiber works well for short to medium distances, providing scalable capacity and cost-effective deployment for data centers, office buildings, and campuses. A media converter, also known as a fiber optic media converter, is a network device that connects two different types of media, such as twisted pair and fiber optic cabling. They are commonly used in pairs, one at each end of the fiber cable span, enabling.
