

The incoming and outgoing lines of the distribution box should be installed inside the box

Equipped with a removable **Mounting Plate** inside the enclosure, enabling customized drilling and secure component mounting.

Overview

Arrange incoming breakers on top, outgoing feeders at the bottom, and controls in the middle. Install ventilation louvers or fans if the total heat dissipation exceeds 50W per cubic meter. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. If an outgoing line is struck by lightning, causing the incoming line fuse to blow first, the entire box loses lightning protection. And all the switching and protective devices are installed in the distribution box. Single Phase Distribution Box generally consists of Double Pole MCBs, Single Pole MCBs, and RCCBs.
