

The radius of curvature of the pigtail should not be less than

Overview

The normal recommendation for fiber optic cable is the minimum bend radius under tension during pulling is 20 times the diameter of the cable (d). How thick is the material you are trying to use this tool on?

The error message is telling you that any radius on the tool. Note: The common term for the curvature of the cable is "bend radius" but sometimes "bend diameter" may be more useful.
