

Underground optical cables include which types of optical cables

Overview

When it comes to underground fibre optic cables, they can usually be divided into two main types: underground pipeline fiber cables and direct buried fiber optic cables. They differ in installation methods, protection measures, and application scenarios. Underground fiber optic cable is designed for direct burial or conduit installation and is widely used in FTTH networks, backbone infrastructure, and industrial communication systems. At GL FIBER (), we specialize in manufacturing high-quality underground fiber optic cables, including GYTA53, GYFTYA53. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors.
