

Uruguayan fluorescence spectrometer for sale

Overview

Los dos detectores de muestras especializados de Duetta recogen fluorescencia en ángulo recto con la luz de excitación, y absorben directamente a través de la muestra. Las aplicaciones de infrarrojo cercano están creciendo rápidamente, y el Duetta está listo para enfrentar el desafío con la detección de fluorescencia desde 250 a 1,100 nm, mucho más allá del alcance de los PMT estándar. A la derecha se ve la emisión de vidrio de neodimio Detección NIR que compara Duetta (CCD) con equipos con PMT.
