

What is the appropriate temperature for outdoor server racks to dissipate heat

Overview

Server rack temperature management prevents hardware overheating, reduces downtime, and extends equipment lifespan. Industry standards, such as ASHRAE guidelines, recommend maintaining temperatures between 18°C-27°C (64°F-81°F) to balance performance and energy efficiency. Many modern servers are perfectly happy with 45 degree celcius operating temperature. This lower limit is recommended for any UPS systems used within the computing environment with valve regulated lead.
